Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis.

^aEstimated numbers resulted from statistical adjustment that accounted for reporting delays and missing risk-factor information, but not for incomplete reporting. Rates are per 100,000 population. Rates are not calculated by transmission category because of the lack of denominator data.

^bHispanics/Latinos can be of any race.

^cHeterosexual contact with a person known to have, or to be at high risk for, HIV infection.

^dIncludes hemophilia, blood transfusion, perinatal exposure, and risk factor not reported or not identified.

^eIncludes hemophilia, blood transfusion, and risk factor not reported or not identified.

^fBecause column totals for estimated numbers were calculated independently of the values for the subpopulations, the values in each column may not sum to the column total.
